This is a great guide with complete information for the railfan. It includes items such as how many trains to expect at the site, what types of trains, radio frequency the railroad is using to communicate, etc. I bought three of these books, one for me, and one for each of my adult sons to use while traveling, so that they can show my grandsons all about trains. Guide to North American Railroad Hot Spots (Railroad Reference Series) (J. David Ingles) Indispensable for railfans who travel, this guide takes you to 100 of the busiest, most interesting train-watching sites across the U.S. and Canada. Each spread includes a color photo and authoritative text about the site written by train-watching experts all over North America. Even then the 'hot spot' number is listed on the inside of the odd numbered pages so you can NOT see the 'hot spot' number. And like I said the table of contents lists only the page so there is NO WAY to associate the page to the 'hot spot' number. VERY DUMB. Map should have used page numbers.
