Robinson manages to paint an interesting picture of what life on Mars could be like. However, after an interesting beginning the book drags for a long time and wastes a lot of time discussing concepts in psychology and social sciences. Red Mars opens with a tragic murder, an event that becomes the focal point for the surviving characters and the turning point in a long intrigue that pits idealistic Mars colonists against a desperately overpopulated Earth, radical political groups of all stripes against each other, and the interests of transnational corporations against the dreams of the pioneers.
